Visteon Remote Access Instructions for Windows

There are two ways to connect to Visteon’s intranet (myPortal), supplier portal and company network using a remote access solution – through portal connect and network connect. Portal connect allows access only to Visteon myPortal. Network connect using FortiClient tool allows access to myPortal, any application, server or network resource. Use the method appropriate to the level of access desired. Below are step-by-step instructions for both.

1. **Access with Portal Connect** – Also called web-mode remote access

   With this method, users can access myPortal or the supplier portal using a web browser and internet connection.

   Access [https://remote.visteon.com](https://remote.visteon.com).

   Provide your Visteon CDSID and password. Click Login.
You will be connected to myPortal. Under Bookmarks, click on Visteon myPortal.

You will be directed to the Web Single Login (WSL) page. Your CDSID and password will be auto populated and Visteon myPortal page will be opened.

2. **Access with Network Connect** – Also called tunnel-mode remote access

By using this method, you can access myPortal, the supplier portal and company network, including any application, server or network resource. FortiClient software is used to establish VPN connectivity, and this is intended for use when outside the Visteon network.

Note: FortiClient software has been pushed to Visteon computers silently, so no installation of software is required by the user.

Visteon approved Forticlient package and install instructions are available at [https://www.visteon.com/company/suppliers/remote-access-to-visteon-forticlient/](https://www.visteon.com/company/suppliers/remote-access-to-visteon-forticlient/)
Once the tool is installed on your PC, follow below steps to access Visteon network.

Access the Windows Start menu and look in the All Programs menu for FortiClient software.

Click on FortiClient.

Two drop down options are available in Forticient tool.

1. Visteon VPN – Intended to be used by Visteon Employees.
2. Visteon Partners VPN – Intended to be used by Suppliers, Partners and Customers to access resources in Visteon domain.

Provide your Visteon CDSID and password and click Connect.

The status will appear in the same window. Once the status has reached 100%, your computer will be connected to the Visteon SSL VPN. You can now access myPortal, and supplier portal, any application, server or network resource.
